Artwork

In order to accurately reproduce your print, its very important we have the artwork in the correct format. Usually we will request a vector file (.eps, vectored PDF or Illustrator .ai file).

For most products: .eps , .pdf, .ai vector formats please. These formats are suitable for all types of print as long as they are vectored. Please note its likely any tinted areas of your artwork will be converted to a solid colour during the production process.

*DISCLAIMER: Remember, we are printing your artwork or logo onto a pre-manufactured product on an uneven surface in full colour which is an extremely difficult and challenging process. Whilst every care will be taken to give you the best results, there may be some slight imperfections or very slight colour variances depending on the artwork style and format. For best results please avoid large areas of block colour as this can give inconsistent print quality.
